Problem statement

You have been given two integers 'NUM1' and 'NUM2' as a string. Your task is to print the sum of both the numbers.

Detailed explanation (Input/output format, Notes, Images)

Constraints:

```
1 <= T <= 10000
1 <= NUM1 <= 10^50
1 <= NUM2 <= 10^50

Where 'T' is the number of test cases. 'NUM1' and 'NUM2' are the numbers whose sum you have
to compute.

Time Limit: 1sec
```

Sample Input 1:

```
4
1 1
2 1
17 13
11 24
```

Sample Output 1:

```
2
3
30
35
```

Explanation For Sample Input 1:

```
In the first test case, 2 is the sum of the two numbers. Therefore the answer is 2.
In the second test case, 3 is the sum of the two numbers. Therefore the answer is 3.
In the third test case, 30 is the sum of the two numbers. Therefore the answer is 30.
In the fourth test case, 35 is the sum of the two numbers. Therefore the answer is 35.
```

Sample Input 2:

```
2
1555555555555555555500 20
4 3
```

Sample Output 2:

```
1555555555555555555520
7
```

Explanation For Sample Input 2:

```
In the first test case, 1555555555555555555520 is the sum of the two numbers. Therefore
the answer is 1555555555555555555520.
In the second test case, 7 is the sum of the two numbers. Therefore the answer is 7.
```
