Problem statement

You are given two non-negative integers, 'NUM1' and 'NUM2', in the form of strings. Return the sum of both strings.

Note :

You do not need to print anything, it has already been taken care of. Just implement the given function.

Example:

Let 'NUM1' be: "5"
Let 'NUM2' be: "21"
The sum of both numbers will be: "26".

Detailed explanation (Input/output format, Notes, Images)

Constraints :

1 <= T <= 10
1 <= |NUM1|, |NUM2| <= 10^5

NUM1 and NUM2 don't have leading zeroes.
Where |NUM1| and |NUM2| denote the length of the respective strings.

Time limit: 1 sec

Sample Input 1 :

2
5 21
10 9

Sample output 1 :

26
19

Explanation For Sample Output 1 :

For the first test case:
The sum of both numbers will be: "26".

For the second test case:
The sum of both numbers will be: "19".

Sample Input 2 :

2
9 9
21 10

Sample output 2 :

18
31
