Problem statement

Take the principal amount, rate of interest, and the time period as input and calculate the Simple Interest.
Note: Return answer as **Floor integer value**.

Detailed explanation (Input/output format, Notes, Images)

Sample Input 1:

```
2000
2.2
4
```

Sample Output 1:

```
176
```

Explanation of Sample Input 1:

```
The input is principal=2000, rate=2.2 and time=4.
So Simple interest=Principal*rate*time/100 hence
answer is 2000*2.2*4/100=176
```
