Problem statement

Take the length(L) and breadth(B) of the rectangle as input and find its area.
Note:

Length and breadth must be an integer value and the area will always be in the range of integers.

Detailed explanation (Input/output format, Notes, Images)

Constraints:

1 <= L, B <= 10^2

Sample Input 1:

4 20

Sample Output 1:

80

Explanation of Sample Input 1:

Length of the rectangle is 4 and breadth is 20.
Hence the area of the rectangle is (length*breadth).
So the answer is 4*20=80.
